# 🛠 Troubleshooting

Common issues and how to resolve them.

---

## Collector Not Running

Check:
sudo systemctl status collector.service

Code

---

## No Data in Dashboard

Verify:

- Collector logs
- Backend `/health` endpoint
- Database file exists

---

## Backup Failures

Check:

- Backup logs
- Disk space
- Permissions

---

## Dashboard Not Loading

Restart backend:
sudo systemctl restart backend.service

Code

---

## API Errors

Inspect logs:
journalctl -u backend.service
