⚙️ Setup Guide

This guide walks you through installing and running the Solar Monitoring Platform on a Raspberry Pi or Linux server.

---

1. Install Dependencies

System packages

sudo apt update
sudo apt install python3 python3-pip sqlite3 git

Code

Python dependencies

pip install -r requirements.txt

Code

---

2. Clone the Repository

git clone https://github.com//.git
cd

Code

---

3. Configure the System

Edit the main configuration file:

/config/system.yaml

Code

Set:

- Panel list
- Polling intervals
- Backup paths
- API settings

---

4. Start Systemd Services

```
sudo cp systemd/*.service /etc/systemd/system/
sudo systemctl daemon-reload
sudo systemctl enable collector.service backend.service
sudo systemctl start collector.service backend.service
```

Code

---

5. Access the Dashboard

Open:

http://:8000

Code

---

6. Verify Data Flow

- Collector logs
- Backend `/health` endpoint
- Dashboard overview card

Next Steps

- Configure backups
- Enable alerts
- Explore analytics
